B 6. DS1pt α̂hm1a/BrkJ

Stock No: 000446 | B6-hemolytic anemia

Also Known As: B6-hemolytic anemia

These mice carry a spontaneous mutation at the Spta1 locus characterized by spherocytosis and some aspects of sickle cell anemia.

**Details**

**Detailed Description**

Homozygotes provide a molecular and phenotypic model of hereditary spherocytosis type 3 and a phenotypic model for hereditary spherocytosis type 1 and some aspects of sickle cell anemia. Most phenotypic assessment has been performed using F1 homozygous offspring of heterozygotes from the C57BL/6J and WB/Re congenic strains or homozygotes generated on a B6;WB segregating background. Approximately half die by 6 months of age. Homozygotes display hemolytic anemia with spherocytosis, microcytosis, reduced hematocrit, reticulocytosis, extramedullary hematopoiesis in the spleen and liver, lymphocytosis, neutrophilia, lymph node hyperlasia, and cardiac hypertrophy. Homozygotes can be identified within the first day of birth by their jaundiced color. Consequent to the underlying disorder, homozygotes are prone to developing gallstones, pneumonitis, and vaso-occlusive disease in multiple organs.

Citation
When using the B6-hemolytic anemia mouse strain in a publication, please cite the originating article(s) and include JAX stock #000446 in your Materials and Methods section.

Production of mice from cryopreserved embryos or sperm occurs in a maximum barrier room, G200

Pricing & Availability

Cryo Recovery
Typically mice are recovered in 10-14 weeks. Contact Customer Service to place an order or for more information.

Payment Terms and Conditions
Terms are granted by individual review and stated on the customer invoice(s) and account statement. These transactions are payable in U.S. currency within the granted terms. Payment for services, products, shipping containers, and shipping costs that are
rendered are expected within the payment terms indicated on the invoice or stated by contract. Invoices and account balances in arrears of stated terms may result in The Jackson Laboratory pursuing collection activities including but not limited to outside agencies and court filings.

The Jackson Laboratory's Genotype Promise

The Jackson Laboratory has rigorous genetic quality control and mutant gene genotyping programs to ensure the genetic background of JAX® Mice strains as well as the genotypes of strains with identified molecular mutations. JAX® Mice strains are only made available to researchers after meeting our standards. However, the phenotype of each strain may not be fully characterized and/or captured in the strain data sheets. Therefore, we cannot guarantee a strain's phenotype will meet all expectations. To ensure that JAX® Mice will meet the needs of individual research projects or when requesting a strain that is new to your research, we suggest ordering and performing tests on a small number of mice to determine suitability for your particular project.
MICE, PRODUCTS or SERVICES are to be used in a safe manner and in accordance with all applicable governmental rules and regulations.

The foregoing represents the General Terms and Conditions applicable to JACKSON's MICE, PRODUCTS or SERVICES. In addition, special terms and conditions of sale of certain MICE, PRODUCTS, or SERVICES may be set forth separately in JACKSON web pages, catalogs, price lists, contracts, and/or other documents, and these special terms and conditions shall also govern the sale of these MICE, PRODUCTS and SERVICES by JACKSON, and by its licensees and distributors.

Acceptance of delivery of MICE, PRODUCTS or SERVICES shall be deemed agreement to these terms and conditions. No purchase order or other document transmitted by purchaser or recipient that may modify the terms and conditions hereof, shall be in any way binding on JACKSON, and instead the terms and conditions set forth herein, including any special terms and conditions set forth separately, shall govern the sale of MICE, PRODUCTS or SERVICES by JACKSON.
