B10.A-H2\(^a\) H2-T18\(^a\)/SgSnJ

Stock No: 000469 | B10.A

Also Known As: B10.A

In this congenic strain, the A/WySn H2 complex (\(H2^a\)), including the nonclassical class I T18\(^a\) (thymus leukemia (TL) antigen) locus, was introgressed onto the C57BL/10SnSg background. Mice congenic for H2 haplotypes are widely used in immunologic research and often vary in immune response and pathogen susceptibility from the recipient strain.

### Details

#### Detailed Description
In this congenic strain, the A/WySn H2 complex (H2^a), including the nonclassical class I T18 (thymus leukemia (TL) antigen) locus, on chromosome 17 was introgressed onto the C57BL/10SnSg background. H2^a is a recombinant haplotype and occurs in the A inbred strains. The H2^a haplotype contains the following alleles: class I K - k, class II A and E - k, class I D - d, and nonclassical loci Qa and T18 - a. In contrast to this congenic, C57BL/6 and C57BL/10 mice carry a natural deletion of the T18 (T18^b) gene. Mice congenic for H2 haplotypes are widely used in immunologic research and often vary in immune response and pathogen susceptibility from the recipient strain.

**Payment Terms and Conditions**

Terms are granted by individual review and stated on the customer invoice(s) and account statement. These transactions are payable in U.S. currency within the granted terms. Payment for services, products, shipping containers, and shipping costs that are rendered are expected within the payment terms indicated on the invoice or stated by contract. Invoices and account balances in arrears of stated terms may result in The Jackson Laboratory pursuing collection activities including but not limited to outside agencies and court filings.

**The Jackson Laboratory’s Genotype Promise**

The Jackson Laboratory has rigorous genetic quality control and mutant gene genotyping programs to ensure the genetic background of JAX® Mice strains as well as the genotypes of strains with identified molecular mutations. JAX® Mice strains are only made available to researchers after meeting our standards. However, the phenotype of each strain may not be fully characterized and/or captured in the strain data sheets. Therefore, we cannot guarantee a strain’s phenotype will meet all expectations. To ensure that JAX® Mice will meet the needs of individual research projects or when requesting a strain that is new to your research, we suggest ordering and performing tests on a small number of mice to determine suitability for your particular project.
