Details

Detailed Description

Mice heterozygous for the $Bdnf^{tm1Jae}$ mutation show about 1/2 normal levels of $Bdnf$ mRNA, but appear normal. Mice homozygous for the $Bdnf^{tm1Jae}$ mutation are smaller than normal siblings and most die within the second postnatal week. They have defective coordination of movements and balance. They also exhibit head bobbing and spinning during periods of hyperactivity. There are rare survivors to adulthood. There is excessive degeneration in all sensory ganglia examined, including the vestibular ganglion. Motor neurons are not affected. BDNF can prevent death of central motor neurons and other neurons *in vitro*, but does not affect these *in vivo*.

Breeding Considerations

The *Bdnf*^{tm1Jae} strain is maintained by mating heterozygous mice to normal wildtype siblings. Heterozygous mice and normal wildtype siblings may be ordered. Expected coat colors from breeding: Black, White Bellied Agouti, Albino

[Additional Breeding and Husbandry Support](#)

Appearance

black, white-bellied agouti, or albino

Related Genotype: segregating for *a*, *A^w*, and *Tyr^c*

Citation

When using the BDNF⁻ mouse strain in a publication, please [cite the originating article\(s\)](#) and include JAX stock #002267 in your Materials and Methods section.

PAYMENT TERMS AND CONDITIONS

Terms are granted by individual review and stated on the customer invoice(s) and account statement. These transactions are payable in U.S. currency within the granted terms. Payment for services, products, shipping containers, and shipping costs that are rendered are expected within the payment terms indicated on the invoice or stated by contract. Invoices and account balances in arrears of stated terms may result in The Jackson Laboratory pursuing collection activities including but not limited to outside agencies and court filings.

THE JACKSON LABORATORY'S GENOTYPE PROMISE

The Jackson Laboratory has rigorous genetic quality control and mutant gene genotyping programs to ensure the genetic background of JAX® Mice strains as well as the genotypes of strains with identified molecular mutations. JAX® Mice strains are only made available to researchers after meeting our standards. However, the phenotype of each strain may not be fully characterized and/or captured in the strain data sheets. **Therefore, we cannot guarantee a strain's phenotype will meet all expectations.** To ensure that JAX® Mice will meet the needs of individual research projects or when requesting a strain that is new to your research, we suggest ordering and performing tests on a small number of mice to determine suitability for your particular project. We do not guarantee [breeding performance](#) and therefore suggest that investigators order more than one breeding pair to avoid delays in their research.
