Overview

Compared to wild-type mice, these Gabra6 knock-out mice exhibit an absence of a dramatic alteration in behavioral response to neuroactive compounds.

Donating Investigator

Gregg E Homanics, University of Pittsburgh
Mice homozygous for the Gabra6<sup>tm1Geh</sup> mutation are viable and fertile with no gross abnormalities. There were no differences detected in behavioral response to ethanol comparing homozygotes to wildtypes from the two background strains, C57BL/6 and 129/SvJ. These findings suggest that the alpha6 subunit of the gamma-aminobutyric acid type A receptor exerts little if any influence on acute functional tolerance, withdrawal hyperexcitability, or protracted tolerance. The only defects discovered thus far are pharmacologic.

Of note, several strains bearing gamma-aminobutyric acid (GABA-A) receptor mutations are available from this donating investigator (Dr. Gregg Homanics, University of Pittsburgh), including Gabra1 (Stock No. 004318), Gabra4 (Stock No. 006874), Gabra6 (Stock No. 002710), Gabrb3 (Stock No. 002711),Gabrd (Stock No. 003725), and Gabrg2 (Stock No. 003137).

Breeding Considerations
This strain can be maintained on a mixed C57BL/6J x 129 genetic background through homozygous sibling matings. The expected coat colors are black and white-bellied agouti.

The Jackson Laboratory's Genotype Promise
The Jackson Laboratory has rigorous genetic quality control and mutant gene genotyping programs to ensure the genetic background of JAX® Mice strains as well as the genotypes of strains with identified molecular mutations. JAX® Mice strains are only made available to researchers after meeting our standards. However, the phenotype of each strain may not be fully characterized and/or captured in the strain data sheets. Therefore, we cannot guarantee a strain's phenotype will meet all expectations. To ensure that JAX® Mice will meet the needs of individual research projects or when requesting a strain that is new to your research, we suggest ordering and performing tests on a small number of mice to determine suitability for your particular project.
