**Overview**

**Also Known As:** bal2

These bal2 mice express a transgene containing Cre recombinase under the control of the rat nestin promoter.

**Donating Investigator**

Klaus Rajewsky, Max Delbruck Centre for Molecular Medicine
These transgenic mice carry the Cre recombinase gene under the control of the rat nestin promoter. When crossed with a strain carrying a gene flanked by loxP sites, the flanked gene will be removed in cells expressing cre, generating a proportion of mosaic animals. All adult organs, including germ-line cells, may be affected. The balancer2 line of transgenic mice show greater variability and instability in their generation of mosaics than the balancer1 line (Stock No. 002858). This variability of the balancer2 line can be of particular benefit if the gene of interest is vital and mosaic individuals are used to bypass lethality.

Payment Terms and Conditions
Terms are granted by individual review and stated on the customer invoice(s) and account statement. These transactions are payable in U.S. currency within the granted terms. Payment for services, products, shipping containers, and shipping costs that are rendered are expected within the payment terms indicated on the invoice or stated by contract. Invoices and account balances in arrears of stated terms may result in The Jackson Laboratory pursuing collection activities including but not limited to outside agencies and court filings.

The Jackson Laboratory's Genotype Promise
The Jackson Laboratory has rigorous genetic quality control and mutant gene genotyping programs to ensure the genetic background of JAX® Mice strains as well as the genotypes of strains with identified molecular mutations. JAX® Mice strains are only made available to researchers after meeting our standards. However, the phenotype of each strain may not be fully characterized and/or captured in the strain data sheets. Therefore, we cannot guarantee a strain's phenotype will meet all expectations. To ensure that JAX® Mice will meet the needs of individual research projects or when requesting a strain that is new to your research, we suggest ordering and performing tests on a small number of mice to determine suitability for your particular project.
