Overview

Also Known As: int-1

These int-1 mice express a transgene containing Wnt1 driven by the mouse mammary tumor virus (MMTV), and show grossly hyperplastic mammary glands compared to wild-type littermates.

## Details

### Detailed Description

Mammary glands from virgin hemizygous females carrying the (Wnt1)1Hev transgene resemble hormonally-stimulated glands from pregnant mice. There was a marked increase in numbers of terminal branches and alveoli, producing a diffuse lobular hyperplasia. Parous transgenic females were unable to lactate. Hemizygous transgenic male glands, while less developed, also were hyperplastic. Adenocarcinomas developed between 3 and 7 months in females and more rarely in males. Occasional metastatic lesions were observed in females. Salivary adenocarcinomas were also occasionally observed in both males and females. Tumors arose stochastically, indicating additional events are required for neoplasia. Subsequent work with Wnt1 transgenic mice includes infection with MMTV to identify contributing oncogenes and mating to transgenic mice bearing other oncogenes.

Breeding Considerations
Hemizygotes are fertile, but hemizygous females do not lactate. When maintaining a live colony, transgenic males can be mated to B6SJLF1/J (JR#100012) females. Expected coat color from breeding: Black, White Bellied Agouti, Light Gray and Tan w/ pink eyes.

Cryorecovery - Domestic Pricing
We will fulfill your order by providing at least two carriers for each strain ordered. The total number, sex, and genotypes provided will vary, although typically 8 or more animals are provided. **Please check genotypes which will be recovered.** While the genotypes of all animals produced will be communicated to you prior to scheduling shipment, the genotypes of animals provided may not reflect the mating scheme and genotypes described in the strain description. **Animals are typically ready to ship in 11-14 weeks.** If a second recovery is required to produce the minimum number of animals, then delivery time would increase to approximately 25 weeks. If we fail to produce animals of the correct genotype, you will not be charged. We cannot guarantee the reproductive success of mice shipped to your facility. If the mice are lost after the first three days (post-arrival) or do not produce progeny at your facility, a new order and fee will be necessary.

Cryorecovery to establish a Dedicated Supply for greater quantities of mice. Mice recovered can be used to establish a dedicated colony to contractually supply you mice according to your requirements. Price by quotation.

**The Jackson Laboratory’s Genotype Promise**

The Jackson Laboratory has rigorous genetic quality control and mutant gene genotyping programs to ensure the genetic background of JAX® Mice strains as well as the genotypes of strains with identified molecular mutations. JAX® Mice strains are only made available to researchers after meeting our standards. However, the phenotype of each strain may not be fully characterized and/or captured in the strain data sheets. **Therefore, we cannot guarantee a strain’s phenotype will meet all expectations.** To ensure that JAX® Mice will meet the needs of individual research projects or when requesting a strain that is new to your research, we suggest ordering and performing tests on a small number of mice to determine suitability for your particular project.
