**Details**

**Detailed Description**

Mice homozygous for the Fcgr3<sup>tm1Jsv</sup> targeted mutation, which eliminates the ligand-binding alpha chain of FcgammaRIII, are viable and fertile. Homozygous mutant mice lack NK cell-mediated antibody-dependent cytotoxicity, phagocytosis of IgG1-coated particles by macrophages, and IgG-mediated mast cell degranulation. They are resistant to IgG-dependent passive cutaneous anaphylaxis, and exhibit an impaired Arthus reaction. FcγRIII<sup>-</sup> mice are also available backcrossed to C57BL/6 for 13 generations as Stock No. 009637.

Payment Terms and Conditions
Terms are granted by individual review and stated on the customer invoice(s) and account statement. These transactions are payable in U.S. currency within the granted terms. Payment for services, products, shipping containers, and shipping costs that are rendered are expected within the payment terms indicated on the invoice or stated by contract. Invoices and account balances in arrears of stated terms may result in The Jackson Laboratory pursuing collection activities including but not limited to outside agencies and court filings.

The Jackson Laboratory's Genotype Promise
The Jackson Laboratory has rigorous genetic quality control and mutant gene genotyping programs to ensure the genetic background of JAX® Mice strains as well as the genotypes of strains with identified molecular mutations. JAX® Mice strains are only made available to researchers after meeting our standards. However, the phenotype of each strain may not be fully characterized and/or captured in the strain data sheets. Therefore, we cannot guarantee a strain's phenotype will meet all expectations. To ensure that JAX® Mice will meet the needs of individual research projects or when requesting a strain that is new to your research, we suggest ordering and performing tests on a small number of mice to determine suitability for your particular project.
