Detailed Description
This transgenic mouse line, with an “enhanced” GFP (EGFP) cDNA under the control of a chicken beta-actin promoter and cytomegalovirus enhancer, have widespread EGFP fluorescence, with the exception of erythrocytes and hair. Note that the donating investigator reports that mice homozygous for this transgene die within the first two weeks following birth.

Of note, it has been the experience at The Jackson Laboratory that Stock No. 006567 (C57BL/6-Tg(CAG-EGFP)131Osb/LeySop.J) demonstrates the highest proportion of GFP expressing cell populations in bone marrow, thymus, spleen and peripheral blood when compared to Stock No. 003291 (C57BL/6-Tg(CAG-EGFP)1Os/J) and Stock No. 007075 (CByJ.B6-Tg(CAG-EGFP)1Osb/J).

### The Jackson Laboratory's Genotype Promise

The Jackson Laboratory has rigorous genetic quality control and mutant gene genotyping programs to ensure the genetic background of JAX® Mice strains as well as the genotypes of strains with identified molecular mutations. JAX® Mice strains are only made available to researchers after meeting our standards. However, the phenotype of each strain may not be fully characterized and/or captured in the strain data sheets. Therefore, we cannot guarantee a strain’s phenotype will meet all expectations. To ensure that
JAX® Mice will meet the needs of individual research projects or when requesting a strain that is new to your research, we suggest ordering and performing tests on a small number of mice to determine suitability for your particular project.
