

**B6.129X1-Brs3<sup>tm1Jfb</sup> /J**

Stock No: **004366** | BRS-3 KO

 Congenic, Targeted Mutation

Typically mice are recovered in 10-14 weeks. Contact Customer Service to place an order or for more information.

### Details

#### Detailed Description

Mice that are homozygous for the targeted mutation are viable, normal in size at birth and do not display any gross physical or behavioral abnormalities. This targeted mutation is X-linked; males bearing the targeted allele display a mutant phenotype. At 15 to 16 weeks of age male mice heterozygous for the mutant allele display increased body weight as compared to wildtype littermates. This mutant mouse strain represents a model that may be useful in studies related to energy metabolism and obesity.

Breeding Considerations

This strain originated on a 129 background, has been backcrossed for 9 generations on the C57BL/6J background. When held in a live colony, breeder pairs were het female X hemi male.

## PAYMENT TERMS AND CONDITIONS

Terms are granted by individual review and stated on the customer invoice(s) and account statement. These transactions are payable in U.S. currency within the granted terms. Payment for services, products, shipping containers, and shipping costs that are rendered are expected within the payment terms indicated on the invoice or stated by contract. Invoices and account balances in arrears of stated terms may result in The Jackson Laboratory pursuing collection activities including but not limited to outside agencies and court filings.

## THE JACKSON LABORATORY'S GENOTYPE PROMISE

The Jackson Laboratory has rigorous genetic quality control and mutant gene genotyping programs to ensure the genetic background of JAX® Mice strains as well as the genotypes of strains with identified molecular mutations. JAX® Mice strains are only made available to researchers after meeting our standards. However, the phenotype of each strain may not be fully characterized and/or captured in the strain data sheets. **Therefore, we cannot guarantee a strain's phenotype will meet all expectations.** To ensure that JAX® Mice will meet the needs of individual research projects or when requesting a strain that is new to your research, we suggest ordering and performing tests on a small number of mice to determine suitability for your particular project. We do not guarantee [breeding performance](#) and therefore suggest that investigators order more than one breeding pair to avoid delays in their research.
