B6.FVB-Tg(Npy-hrGFP)1Lowl/J

Stock No:  006417 | NPY-hrGFP , NPY-GFP

Genetic Background: Congenic, Transgenic

Also Known As: NPY-hrGFP, NPY-GFP

These mice express humanized Renilla Green Fluorescent Protein (hrGFP) under control of the mouse Npy promoter. The hrGFP expressed from this transgene is more stable and resistant to signal fading compared to other GFP's. These transgenic mice may be useful for studies of neurobiology, energy metabolism, obesity, seizures, and epilepsy.

Details

Detailed Description

Hemizygous mice are viable and fertile. These mice express humanized Renilla Green Fluorescent Protein (hrGFP, Stratagene) under control of the mouse neuropeptide Y (Npy) promoter. As such, UV light-exposed transgenic brain tissues show GFP fluorescence patterns consistent with the (Npy) gene. The donating investigator reports that the hrGFP expressed from this transgene is more stable and resistant to signal fading compared to other GFP’s. These transgenic mice may be useful for studies of neurobiology, energy metabolism, obesity, seizures, and epilepsy.

Breeding Considerations
When maintaining a live colony, hemizygous mice can be bred to wildtype siblings or C57BL/6J. Alternatively, transgenic mice may be bred together, although the phenotype of homozygous mice is not known (October 2006).

Payment Terms and Conditions

Terms are granted by individual review and stated on the customer invoice(s) and account statement. These transactions are payable in U.S. currency within the granted terms. Payment for services, products, shipping containers, and shipping costs that are rendered are expected within the payment terms indicated on the invoice or stated by contract. Invoices and account balances in arrears of stated terms may result in The Jackson Laboratory pursuing collection activities including but not limited to outside agencies and court filings.

The Jackson Laboratory's Genotype Promise

The Jackson Laboratory has rigorous genetic quality control and mutant gene genotyping programs to ensure the genetic background of JAX® Mice strains as well as the genotypes of strains with identified molecular mutations. JAX® Mice strains are only made available to researchers after meeting our standards. However, the phenotype of each strain may not be fully characterized and/or captured in the strain data sheets. Therefore, we cannot guarantee a strain's phenotype will meet all expectations. To ensure that JAX® Mice will meet the needs of individual research projects or when requesting a strain that is new to your research, we suggest ordering and performing tests on a small number of mice to determine suitability for your particular project.
