Detailed Description
This reporter strain may be used to detect and monitor cells committed to interleukin 10 production. Green fluorescent protein knocked into the gene faithfully recapitulates normal expression patterns but is preferentially observed in some populations of the intestinal tissue. Expression assayed by fluorescent-activated cell sorting (FACS) has been detected after activation in macrophages and dendritic cells as well as intraintestinal lymphocytes and lamina propria lymphocytes. Targeted allele expression is slightly reduced, as compared to wild-type. Although homozygotes have reduced IL10 expression, they are both viable and fertile.

Breeding Considerations
When maintained as a live colony, heterozygotes or homozygotes may be bred. The donating laboratory maintained the line heterozygously; homozygotes were not used experimentally due to decreased Il10 production.

Payment Terms and Conditions
Terms are granted by individual review and stated on the customer invoice(s) and account statement. These transactions are payable in U.S. currency within the granted terms. Payment for services, products, shipping containers, and shipping costs that are rendered are expected within the payment terms indicated on the invoice or stated by contract. Invoices and account balances in arrears of stated terms may result in The Jackson Laboratory pursuing collection activities including but not limited to outside agencies and court filings.

The Jackson Laboratory’s Genotype Promise
The Jackson Laboratory has rigorous genetic quality control and mutant gene genotyping programs to ensure the genetic background of JAX® Mice strains as well as the genotypes of strains with identified molecular mutations. JAX® Mice strains are only made available to researchers after meeting our standards. However, the phenotype of each strain may not be fully characterized and/or captured in the strain data sheets. Therefore, we cannot guarantee a strain’s phenotype will meet all expectations. To ensure that JAX® Mice will meet the needs of individual research projects or when requesting a strain that is new to your research, we suggest ordering and performing tests on a small number of mice to determine suitability for your particular project.
