There is also an approximately 6-fold increase in levels of c-myc (*Myc*, myelocytomatosis oncogene) to IgH (*Igh*, immunoglobulin heavy chain complex) DNA translocations in B cells. Protein levels are not regulated by microRNA-155 in this mouse strain.

### Details

#### Detailed Description

These mice carry a mutation in the putative microRNA-155 (miR-155) binding site of the activation-induced cytidine deaminase gene, designated as (*Aicda*<sup>tm155</sup>). B cells over-express the targeted gene and consequently there is a 20% increase in the frequency of immunoglobulin class switch recombinations. There is also an approximately 6-fold increase in levels of c-myc (*Myc*, myelocytomatosis oncogene) to IgH (*Igh*, immunoglobulin heavy chain complex) DNA translocations in B cells. Protein levels are not regulated by microRNA-155 in this mouse strain. Homozygotes are viable and fertile.

PAYMENT TERMS AND CONDITIONS

Terms are granted by individual review and stated on the customer invoice(s) and account statement. These transactions are

payable in U.S. currency within the granted terms. Payment for services, products, shipping containers, and shipping costs that are rendered are expected within the payment terms indicated on the invoice or stated by contract. Invoices and account balances in arrears of stated terms may result in The Jackson Laboratory pursuing collection activities including but not limited to outside agencies and court filings.

## THE JACKSON LABORATORY'S GENOTYPE PROMISE

The Jackson Laboratory has rigorous genetic quality control and mutant gene genotyping programs to ensure the genetic background of JAX® Mice strains as well as the genotypes of strains with identified molecular mutations. JAX® Mice strains are only made available to researchers after meeting our standards. However, the phenotype of each strain may not be fully characterized and/or captured in the strain data sheets. **Therefore, we cannot guarantee a strain's phenotype will meet all expectations.** To ensure that JAX® Mice will meet the needs of individual research projects or when requesting a strain that is new to your research, we suggest ordering and performing tests on a small number of mice to determine suitability for your particular project. We do not guarantee [breeding performance](#) and therefore suggest that investigators order more than one breeding pair to avoid delays in their research.
