Details

Detailed Description

Mice that are homozygous for the targeted mutation are viable, but show an increased incidence of sarcomas and lymphomas. Sperm, tail and tumor cells from homozygous mice exhibit microsatellite instability. Male mice on the mixed C57BL/6 and 129S2 background are infertile with reduced numbers of spermatozoa. Spermatozoa exhibit misshapen heads, truncated, irregular flagella. This strain may be useful in the studies of spermatogenesis, cancer and DNA mismatch repair.

Breeding Considerations

While maintaining a live colony, these mice are bred as heterozygotes. Male mice homozygous for the mutation are infertile.

PAYMENT TERMS AND CONDITIONS

Terms are granted by individual review and stated on the customer invoice(s) and account statement. These transactions are payable in U.S. currency within the granted terms. Payment for services, products, shipping containers, and shipping costs that are rendered are expected within the payment terms indicated on the invoice or stated by contract. Invoices and account balances in arrears of stated terms may result in The Jackson Laboratory pursuing collection activities including but not limited to outside agencies and court filings.

THE JACKSON LABORATORY'S GENOTYPE PROMISE

The Jackson Laboratory has rigorous genetic quality control and mutant gene genotyping programs to ensure the genetic background of JAX® Mice strains as well as the genotypes of strains with identified molecular mutations. JAX® Mice strains are only made available to researchers after meeting our standards. However, the phenotype of each strain may not be fully characterized and/or captured in the strain data sheets. **Therefore, we cannot guarantee a strain's phenotype will meet all expectations.** To ensure that JAX® Mice will meet the needs of individual research projects or when requesting a strain that is new to your research, we suggest ordering and performing tests on a small number of mice to determine suitability for your particular project. We do not guarantee [breeding performance](#) and therefore suggest that investigators order more than one breeding pair to avoid delays in their research.
