The Ai35D (or Ai35Δneo) allele has a floxed-STOP cassette preventing transcription of the downstream Arch-GFP fusion gene. Exposure to Cre recombinase that deletes the STOP cassette results in Arch-GFP expression. These Ai35D mice are useful for optogenetic studies to express an inhibitory opsin that effectively silences the activity of cortical neurons (and perhaps other excitable cell types such as muscle cells and immune cells).

Of note, the similarly-designed Ai40D mouse line (Stock No. 021188) has an ArchT/EGFP fusion protein with improved light sensitivity, and is on a C57BL/6J genetic background.

Donating Investigator
Hongkui Zeng, Allen Institute for Brain Science

Typically mice are recovered in 10-14 weeks. Contact Customer Service to place an order or for more information.
Ai35D (or Ai35Δneo) mice homozygous for the Rosa-CAG-LSL-Arch-GFP-WPRE conditional allele are viable and fertile. A loxP-flanked STOP cassette prevents transcription of the downstream Arch-GFP fusion gene (see below for detailed description of Arch-GFP). Because the CAG promoter driven reporter construct was targeted for insertion into the Gt(ROSA)26Sor locus, Arch-GFP expression is determined by which tissue(s) express Cre recombinase. When bred to mice that express Cre recombinase, the resulting offspring will have the STOP cassette deleted in the cre-expressing tissues; resulting in expression of the Arch-GFP fusion protein. The donating investigator reports that Ai35D mice do not express Arch-GFP prior to introduction of Cre recombinase. Fusion protein expression following exposure to cre can be detected by GFP fluorescence and mRNA (in situ hybridization) [and presumably by antibody staining (immunohistochemistry); although this was not tested by the donating investigator]. Following exposure to Cre recombinase, illuminating Arch-expressing neurons with yellow-green light (~575 nm) leads to reversible photoinhibition of action potential firing/neural activity in these cells. The donating investigator specifically reports that expression of the inhibitory opsin occurs at levels sufficient to effectively silence the activity of cortical neurons. Fusion protein expression in tissues other than brain has not yet been evaluated by the donating investigator (April 2011). Unlike the Ai35 mice from which they were derived, these Ai35D mice no longer harbor the downstream FRT site or attB/attP-flanked selection cassette.

The bacterial opsins are retinal-binding proteins that combine a light-sensitive domain with an ion channel or pump; providing light-dependent ion transport, membrane potential alteration, and sensory functions to bacteria. Archaerhodopsin-3 (Arch, aR-3, or aop3) is a yellow-green light-driven (~575 nm) outward proton pump that causes hyperpolarization and prevents action potentials. Unlike light-driven chloride pumps that enter long-lasting inactive states in response to light, Arch spontaneously recovers from light-dependent inactivation. Arch is capable of generating photocurrents at several hundred picoamps (pA) even at low light powers. For example, illumination of Arch-expressing cells leads to reversible photoinhibition of action potential firing/neural activity in these cells.

The Arch-GFP fusion protein is composed of the Halorubrum sodomense-derived Archaerhodopsin-3 (Arch, aR-3, or aop3) fused in-frame with a green fluorescent protein (GFP). The Arch-GFP fusion protein in these mice has small domain modifications designed to facilitate correct processing and localization of newly synthesized Arch-GFP protein (including a signal sequence and an endoplasmic reticulum exporting sequence).

For characterization information, see images at the Allen Institute for Brain Science website (Ai35 images).

Of note, the similarly-designed Ai40D mouse line (Stock No. 021188) has an ArchT/EGFP fusion protein with improved light sensitivity, and is on a C57BL/6J genetic background.

PAYMENT TERMS AND CONDITIONS

Terms are granted by individual review and stated on the customer invoice(s) and account statement. These transactions are payable in U.S. currency within the granted terms. Payment for services, products, shipping containers, and shipping costs that are rendered are expected within the payment terms indicated on the invoice or stated by contract. Invoices and account balances in arrears of stated terms may result in The Jackson Laboratory pursuing collection activities including but not limited to outside agencies and court filings.

THE JACKSON LABORATORY'S GENOTYPE PROMISE

The Jackson Laboratory has rigorous genetic quality control and mutant gene genotyping programs to ensure the genetic background of JAX® Mice strains as well as the genotypes of strains with identified molecular mutations. JAX® Mice strains are only made available to researchers after meeting our standards. However, the phenotype of each strain may not be fully characterized and/or captured in the strain data sheets. Therefore, we cannot guarantee a strain's phenotype will meet all expectations. To ensure that JAX® Mice will meet the needs of individual research projects or when requesting a strain that is new to your research, we suggest ordering and performing tests on a small number of mice to determine suitability for your particular project. We do not guarantee breeding performance and therefore suggest that investigators order more than one breeding pair to avoid delays in their research.

Terms Of Use

TERMS OF USE
General Terms and Conditions
JAX® Mice, Products & Services Conditions of Use

"MICE" means mouse strains, their progeny derived by inbreeding or crossbreeding, unmodified derivatives from mouse strains or their progeny supplied by The Jackson Laboratory ("JACKSON"). "PRODUCT(S)" means biological materials supplied by JACKSON, and their derivatives. "SERVICES" means projects conducted by JACKSON for other parties that may include but are not limited to the use of MICE or PRODUCTS. "RECIPIENT" means each recipient of MICE, PRODUCTS, or SERVICES provided by JACKSON including each institution, its employees and other researchers under its control. MICE or PRODUCTS shall not be: (i) used for any purpose other than internal research, (ii) sold or otherwise provided to any third party for any use, or (iii) provided to any agent or other third party to provide breeding or other services. Acceptance of MICE, PRODUCTS or SERVICES from JACKSON shall be deemed as agreement by RECIPIENT to these conditions, and departure from these conditions requires JACKSON’s prior written authorization.

No Warranty

MICE, PRODUCTS AND SERVICES ARE PROVIDED "AS IS". JACKSON EXTENDS NO WARRANTIES OF ANY KIND, EITHER EXPRESS, IMPLIED, OR STATUTORY, WITH RESPECT TO MICE, PRODUCTS OR SERVICES, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, OR ANY WARRANTY OF NON-INFRINGEMENT OF ANY PATENT, TRADEMARK, OR OTHER INTELLECTUAL PROPERTY RIGHTS.

Credit for PRODUCTS or SERVICES

In case of dissatisfaction for a valid reason and claimed in writing by a purchaser within ninety (90) days of receipt of, PRODUCTS or SERVICES, JACKSON will, at its option, provide credit or replacement for the PRODUCT received or the SERVICES provided; JACKSON makes no other representations and this shall be the exclusive remedy of the purchaser. Please note specific policy for live mice.

Animal Care and Use for SERVICES

Consistent with the requirement for a written understanding regarding animal care and use, the JACKSON Animal Care and Use Committee will review the animal care and use protocol(s) associated with any SERVICES to be performed at JACKSON, and JACKSON shall have ultimate responsibility and authority for the care of animals while on site or in JACKSON custody.

No Liability

In no event shall JACKSON, its trustees, directors, officers, employees, and affiliates be liable for any causes of action or damages, including any direct, indirect, special, or consequential damages, arising out of the provision of MICE, PRODUCTS, or SERVICES, including economic damage or injury to property and lost profits, and including any damage arising from acts or negligence on the part of JACKSON, its agents or employees. Unless prohibited by law, in purchasing or receiving MICE, PRODUCTS, or SERVICES from JACKSON, purchaser or recipient, or any party claiming by or through them, expressly releases and discharges JACKSON from all such causes of action or damages, and further agrees to defend and indemnify JACKSON from any costs or damages arising out of any third party claims.

MICE, PRODUCTS or SERVICES are to be used in a safe manner and in accordance with all applicable governmental rules and regulations.

The foregoing represents the General Terms and Conditions applicable to JACKSON’s MICE, PRODUCTS or SERVICES. In addition, special terms and conditions of sale of certain MICE, PRODUCTS, or SERVICES may be set forth separately in JACKSON web pages, catalogs, price lists, contracts, and/or other documents, and these special terms and conditions shall also govern the sale of these MICE, PRODUCTS and SERVICES by JACKSON, and by its licensees and distributors.

Acceptance of delivery of MICE, PRODUCTS or SERVICES shall be deemed agreement to these terms and conditions. No purchase order or other document transmitted by purchaser or recipient that may modify the terms and conditions hereof, shall be in any way binding on JACKSON, and instead the terms and conditions set forth herein, including any special terms and conditions set forth separately, shall govern the sale of MICE, PRODUCTS or SERVICES by JACKSON.
### Related Strains of BALB/c Mice

The Jackson Laboratory provides BALB/c mice for various research purposes. These strains are widely used due to their stability and low inherent variability. The BALB/c strain is particularly useful in immune system studies and has been instrumental in many groundbreaking research projects.
