## GENETIC OVERVIEW

Genetic Background

Generation

*Rbfox2<sup>tm1.1Dbk</sup>*

Alele Type

Targeted (Conditional ready (e.g. floxed), No functional change)

Gene Symbol

*Rbfox2*

Gene Name

RNA binding protein, fox-1 homolog (C. elegans) 2

### Details

#### Detailed Description

These *Fox-2<sup>fllox</sup>* mutant mice possess *loxP* sites flanking exons 6-7 of the RNA binding protein, fox-1 homolog 2 (*Rbfox2*) gene. Mice that are homozygous for this allele are viable, fertile, and normal in size. *Fox-2* is widely expressed, highest in brain and heart, and regulates alternative splicing in vertebrates by binding specifically to (U)GCAUG sequences. When these mutant mice are bred to mice that express Cre recombinase, the resulting offspring will have exons 6-7 deleted in the Cre-expressing tissue, resulting in inactivation of *Fox-2* gene function.

When bred to mice carrying Tg(Pcp2-cre)2Mpin (Stock No. [004146](#)) and *Rbfox1<sup>tm1.1Dblk</sup>* (Stock No. [014089](#)), Cre recombinase expression in the Purkinje cells may be useful in studies of Purkinje cell pacemaking.

### PAYMENT TERMS AND CONDITIONS

Terms are granted by individual review and stated on the customer invoice(s) and account statement. These transactions are payable in U.S. currency within the granted terms. Payment for services, products, shipping containers, and shipping costs that are rendered are expected within the payment terms indicated on the invoice or stated by contract. Invoices and account balances in arrears of stated terms may result in The Jackson Laboratory pursuing collection activities including but not limited to outside agencies and court filings.

### THE JACKSON LABORATORY'S GENOTYPE PROMISE

The Jackson Laboratory has rigorous genetic quality control and mutant gene genotyping programs to ensure the genetic background of JAX® Mice strains as well as the genotypes of strains with identified molecular mutations. JAX® Mice strains are only made available to researchers after meeting our standards. However, the phenotype of each strain may not be fully characterized and/or captured in the strain data sheets. **Therefore, we cannot guarantee a strain's phenotype will meet all expectations.** To ensure that JAX® Mice will meet the needs of individual research projects or when requesting a strain that is new to your research, we suggest ordering and performing tests on a small number of mice to determine suitability for your particular project. We do not guarantee [breeding performance](#) and therefore suggest that investigators order more than one breeding pair to avoid delays in their research.
