

**B6.Cg-Pkd211<sup>tm1.1Yuni</sup>/J**

Stock No: **016853**

 Congenic, Targeted Mutation

Typically mice are recovered in 10-14 weeks. Contact Customer Service to place an order or for more information.

## Details

### Detailed Description

Mice that are homozygous for the targeted mutation are viable, fertile, normal in size and do not display any gross physical or behavioral abnormalities. No gene product (mRNA) is detected by RT-PCR analysis of taste buds of the circumvallate. Recorded chorda tympani nerve responses of homozygotes to sour and acid (HCl, acetic acid and citric) taste stimuli is reduced compared to wildtype controls. During backcrossing, the Y chromosome may not have been fixed to the C57BL/6J genetic background. No fluorescence from the mCherry in the knock in construct has been observed in the mice.

When crossed to mice carrying the *Pkd113*<sup>tm1Hmat</sup> targeted mutation (See Stock No. [016850](#)), the double homozygous mutant mice exhibit reduced chorda tympani nerve responses to sour and acid taste stimuli.

## PAYMENT TERMS AND CONDITIONS

Terms are granted by individual review and stated on the customer invoice(s) and account statement. These transactions are payable in U.S. currency within the granted terms. Payment for services, products, shipping containers, and shipping costs that are rendered are expected within the payment terms indicated on the invoice or stated by contract. Invoices and account balances in arrears of stated terms may result in The Jackson Laboratory pursuing collection activities including but not limited to outside agencies and court filings.

## THE JACKSON LABORATORY'S GENOTYPE PROMISE

The Jackson Laboratory has rigorous genetic quality control and mutant gene genotyping programs to ensure the genetic background of JAX® Mice strains as well as the genotypes of strains with identified molecular mutations. JAX® Mice strains are only made available to researchers after meeting our standards. However, the phenotype of each strain may not be fully characterized and/or captured in the strain data sheets. **Therefore, we cannot guarantee a strain's phenotype will meet all expectations.** To ensure that JAX® Mice will meet the needs of individual research projects or when requesting a strain that is new to your research, we suggest ordering and performing tests on a small number of mice to determine suitability for your particular project. We do not guarantee [breeding performance](#) and therefore suggest that investigators order more than one breeding pair to avoid delays in their research.
