Overview

This spontaneous frameshift, predicted to modify only the last of the four zinc finger domains in ZFP191, is valuable in the study of the transcriptional regulation in oligodendrocytes that is essential for myelination of axons in the central nervous system.

Detailed Description
Mice homozygous for the Zfp191<sup>hmcns-2J</sup> mutation have very little myelin in the central nervous system when assessed at four weeks of age, but no myelin deficiency in the peripheral nervous system. Homozygotes can be identified as early as fourteen days of age by a whole body tremor that is most pronounced when the mouse is moving. Both males and females have tonic seizures. The severity of the tremors becomes more pronounced as they age and they do not survive beyond four to five weeks of age. Because of this, this strain must be maintained using heterozygous breeders. A hearing deficit, which varies in expressivity, has also been attributed to this mutation in this strain.

### Payment Terms and Conditions

Terms are granted by individual review and stated on the customer invoice(s) and account statement. These transactions are payable in U.S. currency within the granted terms. Payment for services, products, shipping containers, and shipping costs that are rendered are expected within the payment terms indicated on the invoice or stated by contract. Invoices and account balances in arrears of stated terms may result in The Jackson Laboratory pursuing collection activities including but not limited to outside agencies and court filings.

### The Jackson Laboratory's Genotype Promise

The Jackson Laboratory has rigorous genetic quality control and mutant gene genotyping programs to ensure the genetic background of JAX® Mice strains as well as the genotypes of strains with identified molecular mutations. JAX® Mice strains are only made available to researchers after meeting our standards. However, the phenotype of each strain may not be fully characterized and/or captured in the strain data sheets. Therefore, we cannot guarantee a strain's phenotype will meet all expectations. To ensure that JAX® Mice will meet the needs of individual research projects or when requesting a strain that is new to your research, we suggest ordering and performing tests on a small number of mice to determine suitability for your particular project.
