Details

Detailed Description

These *Fgf10^C* mice possess *loxP* sites flanking exon 2 of the fibroblast growth factor 10 (*Fgf10*) gene. The donating investigator reports that a tetracycline response element present upstream of exon 2 has no effect on expression unless a tetO binding protein is present and activated. FGF10 is expressed in head and limb mesenchyme, and is involved in cell division, embryonic development, regulation of cell growth and maturation, formation of blood vessels, and wound healing. Homozygotes are viable and fertile. When bred to mice that express tissue-specific Cre recombinase, resulting offspring will have exon 2 deleted in the *cre*-expressing tissues.

For example, when bred to BALB/c-Tg(CMV-cre)1Cgn/J mice (Stock No. [003465](#)), FGF10 null mice fail to initiate inner ear and limb development.

PAYMENT TERMS AND CONDITIONS

Terms are granted by individual review and stated on the customer invoice(s) and account statement. These transactions are payable in U.S. currency within the granted terms. Payment for services, products, shipping containers, and shipping costs that are rendered are expected within the payment terms indicated on the invoice or stated by contract. Invoices and account balances in arrears of stated terms may result in The Jackson Laboratory pursuing collection activities including but not limited to outside agencies and court filings.

THE JACKSON LABORATORY'S GENOTYPE PROMISE

The Jackson Laboratory has rigorous genetic quality control and mutant gene genotyping programs to ensure the genetic background of JAX® Mice strains as well as the genotypes of strains with identified molecular mutations. JAX® Mice strains are only made available to researchers after meeting our standards. However, the phenotype of each strain may not be fully characterized and/or captured in the strain data sheets. **Therefore, we cannot guarantee a strain's phenotype will meet all expectations.** To ensure that JAX® Mice will meet the needs of individual research projects or when requesting a strain that is new to your research, we suggest ordering and performing tests on a small number of mice to determine suitability for your particular project. We do not guarantee [breeding performance](#) and therefore suggest that investigators order more than one breeding pair to avoid delays in their research.
