Details

Detailed Description

Myf6^{CE} mice express a Cre-ERT2 fusion protein from endogenous *Myf6* promoter/enhancer elements. MYF6 is a DNA binding protein involved in the development of muscle. Heterozygous mice are viable and fertile. When *Myf6*^{CE} mice are bred with mice containing *loxP*-flanked sequence, tamoxifen-inducible, Cre-mediated recombination will result in deletion of the floxed sequences.

For example, when bred to B6.129S4-*Gt(ROSA)26Sor*^{tm1Sor}/J mice (Stock No. [003474](#)), tamoxifen-inducible Cre-mediated recombination results in *lacZ* staining of somite from E8.75 to E10.75, and in trunk and limb muscles with increasing intensity from E12.75 to E14.75. *lacZ* staining was evident in the limb muscles of adult animals, and was absent from the heart.

Breeding Considerations

When maintaining a live colony heterozygous mice may be bred to wildtype mice from the colony. The donating investigator has not attempted to make this strain homozygous.

PAYMENT TERMS AND CONDITIONS

Terms are granted by individual review and stated on the customer invoice(s) and account statement. These transactions are payable in U.S. currency within the granted terms. Payment for services, products, shipping containers, and shipping costs that are rendered are expected within the payment terms indicated on the invoice or stated by contract. Invoices and account balances in arrears of stated terms may result in The Jackson Laboratory pursuing collection activities including but not limited to outside agencies and court filings.

THE JACKSON LABORATORY'S GENOTYPE PROMISE

The Jackson Laboratory has rigorous genetic quality control and mutant gene genotyping programs to ensure the genetic background of JAX® Mice strains as well as the genotypes of strains with identified molecular mutations. JAX® Mice strains are only made available to researchers after meeting our standards. However, the phenotype of each strain may not be fully characterized and/or captured in the strain data sheets. **Therefore, we cannot guarantee a strain's phenotype will meet all expectations.** To ensure that JAX® Mice will meet the needs of individual research projects or when requesting a strain that is new to your research, we suggest ordering and performing tests on a small number of mice to determine suitability for your particular project. We do not guarantee [breeding performance](#) and therefore suggest that investigators order more than one breeding pair to avoid delays in their research.
