Overview

Also Known As: BAF250a f

BAF250a floxed mice have loxP sites flanking exon 8 of the AT rich interactive domain 1A (SWI-like) (Arid1a) gene. This strain may be useful for generating conditional mutations for use in applications related to BAF250a-mediated chromatin remodeling and ES cell self-renewal, differentiation, and cell lineage decisions.

Details

Detailed Description

BAF250a<sup>fl</sup> floxed mice possess loxP sites flanking exon 8 of the AT rich interactive domain 1A (SWI-like) (Arid1a) gene. BAF250a is a subunit of an ATP-dependent BAF chromatin remodeling complex, in the SNF/SWI superfamily. BAF250a is required for transcriptional activation of genes normally repressed by chromatin. Homozygotes are viable and fertile. When these mutant mice are bred to mice that express Cre recombinase, resulting offspring will have exon 8 deleted in cre-expressing tissues. Studies of BAF250a-conditional KO embryos results in embryonic lethality showing the requirement for BAF250a during embryonic development.

### Payment Terms and Conditions

Terms are granted by individual review and stated on the customer invoice(s) and account statement. These transactions are payable in U.S. currency within the granted terms. Payment for services, products, shipping containers, and shipping costs that are rendered are expected within the payment terms indicated on the invoice or stated by contract. Invoices and account balances in arrears of stated terms may result in The Jackson Laboratory pursuing collection activities including but not limited to outside agencies and court filings.

### The Jackson Laboratory's Genotype Promise

The Jackson Laboratory has rigorous genetic quality control and mutant gene genotyping programs to ensure the genetic background of JAX® Mice strains as well as the genotypes of strains with identified molecular mutations. JAX® Mice strains are only made available to researchers after meeting our standards. However, the phenotype of each strain may not be fully characterized and/or captured in the strain data sheets. Therefore, we cannot guarantee a strain's phenotype will meet all expectations. To ensure that JAX® Mice will meet the needs of individual research projects or when requesting a strain that is new to your research, we suggest ordering and performing tests on a small number of mice to determine suitability for your particular project.
