Overview
Also Known As: Black 6 DIO Control, B6 DIO Control, B6J DIO Control, DIO Control Mouse, Diet-induced Obesity Control

C57BL/6J DIO Control mice are provided a low fat diet with the same protein content as the diet provided to C57BL/6J DIO (diet-induced obese) mice. DIO controls do not develop the pre-type 2 diabetes phenotypes observed in DIO mice. Male C57BL/6J mice are placed on low fat diet at 6 weeks of age and study-ready animals are available between 7 and 30 weeks of age. For projects requiring a custom diet or a different strain, our project managers can work with you to get the mice you need.

Details
Important Note
This strain is homozygous for Cdh23<sup>ahl</sup>, the age related hearing loss 1 mutation, which on this background results in progressive hearing loss with onset after 10 months of age.

Detailed Description
In comparison to DIO mice fed a high fat diet, C57BL/6J mice fed a low-fat control diet do not become obese, maintain normal blood glucose and serum lipid levels, and have improved glucose tolerance (see detailed phenotypic data). They serve as a control for DIO C57BL/6J mice.

**The Jackson Laboratory’s Genotype Promise**

The Jackson Laboratory has rigorous genetic quality control and mutant gene genotyping programs to ensure the genetic background of JAX® Mice strains as well as the genotypes of strains with identified molecular mutations. JAX® Mice strains are only made
available to researchers after meeting our standards. However, the phenotype of each strain may not be fully characterized and/or captured in the strain data sheets. **Therefore, we cannot guarantee a strain’s phenotype will meet all expectations.** To ensure that JAX® Mice will meet the needs of individual research projects or when requesting a strain that is new to your research, we suggest ordering and performing tests on a small number of mice to determine suitability for your particular project.
